

OM GAWDE

omgawde775@gmail.com | +36707417255 | Budapest, Hungary | [linkedin.com/in/omgawde/](https://www.linkedin.com/in/omgawde/) | omgawde.netlify.app/

Software Engineer

SUMMARY

Software Engineer experienced in building full-stack applications using Java, Spring Boot, and JavaScript. Developed AI-powered solutions integrating Gemini, Whisper, and Azure Open AI APIs, with a strong focus on problem-solving, software engineering best practices, and creating impactful real-world applications. Contributed to multiple open-source projects. Passionate about continuous learning, collaboration, and delivering high-quality software.

SKILLS

Java, Python, JavaScript | Spring, Spring Boot, Hibernate, React, React Native, Streamlit, Angular | PostgreSQL, MySQL, SQLite, Supabase, SQL | Git, GitHub, GitLab, GitHub Actions, Docker, AWS, Azure, Vercel, Netlify | Gemini API, Whisper, Azure OpenAI | Windows Terminal, Bash Scripting, Apache Maven, Apache Tomcat, Vite, Postman | Figma, Canva, Adobe Illustrator | HTML, CSS | REST APIs

WORK EXPERIENCE

Atomity

Bensheim, Germany

Backend Engineer

May 2026 - Present

- Designed In-Memory Pipeline Tests: Created an isolated testing profile (application-test.yml) featuring dynamic, on-the-fly cryptographic token generation to satisfy security compliance scanners and decouple CI/CD workflows from external databases.
- Resolved complex dependency and build-cycle conflicts in build.gradle.kts by optimizing the Protobuf and gRPC configuration, resulting in a more stable and efficient CI/CD pipeline.
- Engineered a robust test isolation strategy by migrating to @MockitoBean for service stubbing; decoupled integration tests from volatile external infrastructure (NATS/Postgres/Redis), significantly improving test suite reliability and execution.

EPAM

Budapest, Hungary

Automated Testing in Java Trainee

Feb 2026 - May 2026

- Designed and developed REST APIs using Java and Spring Boot, applying HTML, CSS, and JavaScript for frontend integration, and collaborated with peers through code reviews and learning sessions
- Improved Java skills by 30% through hands on experience with Spring Boot and React, and applied this knowledge to automate testing practices, resulting in a 25% reduction in testing time
- Utilized Git for version control, managed 50 commits/week, and ensured near complete coverage of automated tests, resulting in a 95% pass rate for deployed features
- Developed and shipped 3-5 releases/month of a web application using Angular, SQL, and REST APIs, handling 20 tickets/week and supporting a team of 5 developers through code reviews and learning sessions

PROJECTS

Clarity AI— Chrome Extension + Spring Boot Backend

- Built an AI powered Chrome extension to summarize notes, extract key insights, and suggest related topics using the Gemini API
- Developed a scalable backend with Spring Boot, enabling fast realtime API processing

Medinoted AI— Full Stack AI Health Platform

- Developed a clinical note cleaner and AI health diary with voice transcription, SOAP formatting, and sentiment analysis
- Integrated Whisper for speech to text and Azure OpenAI for insights, with data visualization to track user health trends

EDUCATION

UNIVERSITY OF DUNAUJVAROS

Bachelors in Computer Science Engineering, GPA: 4.6/5

Sep 2023 - Present

- Achieved consecutive wins at science fairs by designing and implementing an aviation radar system, demonstrating strong programming and problem-solving skills
- Co-founded a Computer Science Club, growing a collaborative tech community
- Won the Google Developer Student Clubs (GDSC) competition against teams from multiple Hungarian universities, highlighting technical excellence, teamwork, and leadership

CERTIFICATIONS

- MasterJava, Spring Boot, Spring AI, Docker & Microservices— Telusko (2026): Learned Spring Boot, Spring Security, microservices architecture, and Docker
- Front End Engineering Job Simulation — Skyscanner (Forage) (Jan 2026): Built a React based application in a real world simulation
